Mustafa Mehboob

Full Stack Software Engineer · Cloud Architecture · Backend

+92-311-4456240 | mustafaw3451@gmail.com | mustafa-mehboob.vercel.app | LinkedIn | github.com/mustafa-mx

Summary

Full Stack Software Engineer with **4+ years** building production SaaS across MERN, Next.js, Rails, and Django. Owns systems end-to-end: scalable APIs and data models, AWS cloud architecture and Terraform, CI/CD, and incident response. Currently **leading a 3-engineer team** and driving a high-scale platform **past $1M in revenue**.

Experience

Software Engineer Jan 2026 – Present
Softaims *Lahore, Pakistan*

- **Led a 3-engineer team** building UKVisaPortal – a TypeScript monorepo (client/admin/shared) with **50+ REST endpoints** on a 39-table PostgreSQL/Prisma schema – personally delivering **80%+ of features** and driving it **past $1M in revenue**.
- Inherited the platform post-breach: hardened it (AWS WAF, Cloudflare, Turnstile, origin lock), led live Layer-7 DDoS response – **blocked ∼600M of 700M requests** at peak – and remediated the breach and system-wide vulnerabilities.
- Designed the AWS architecture from scratch: private VPC with CloudFront VPC Origins → private ALB → ECS Fargate, plus RDS, Route 53, ACM, and **AES-256-GCM**-encrypted documents in S3 behind CloudFront signed URLs.
- Built the Admin operations suite (assignment/call queues, auto-assignment, shift/time tracking, GDPR/DSAR, Zendesk/Slack) and integrated Adyen/MamoPay/PayPal payments, SendGrid, CI/CD, and JWT/4-role RBAC/MFA.
- **Co-led WorldVisaHub** (Rails 8, Inertia, React 19, PostgreSQL) – versioned drag-and-drop form builder with immutable published versions and in-form payment gating, granular RBAC with per-user overrides, and a full admin audit trail.
- Engineered its document pipeline – presigned S3 uploads on STS assumed roles (**zero static keys**), magic-byte validation, KMS encryption, PII-redacted logs – plus **MediaPipe** camera capture with on-device pose/lighting checks.
- Provisioned its AWS staging in **Terraform** (dedicated VPC, private Fargate tasks behind NAT, OIDC deploy role pinned to repo and branch, Secrets Manager), documented in an ADR and runbook.
- Building a grain-aeration **SCADA**: NestJS **OPC UA** service (chunked subscriptions, per-node write retry) verified against an 800-tag PLC simulator; Redis pub/sub, TimescaleDB, and a React 19 HMI over SSE with permission-based RBAC.

Associate Software Engineer Feb 2022 – Dec 2025
OptimaGeeks (Staff Augmentation Before Webmended, UAE · Feb 2022 – Feb 2024) *Johar Town, Lahore*

- Led Userbird – a GA + PostHog-style product-analytics & session-replay platform: injectable JS SDK capturing pageviews, events, and recordings; React/Vite dashboard on Cloudflare Pages over BigQuery, **40%** faster via caching and lazy loading.
- Led mDrive Asia e-commerce (Next.js + Django/PostgreSQL) with NextAuth, Apple GSX, and custom payment APIs – a full storefront and admin, from checkout to fulfilment.
- Shipped **8+ production apps**, including a LinkedIn Sales Navigator extension (React/TS → Captely CRM), WP Post Automation (PERN, Node Cron), AGCRM (OpenAI), a Revolt bot on Cloudflare Workers, a NestJS backend, a Django QMS, and a YouTube live recorder – deployed via Docker, PM2, Nginx.

Projects

ukvisaportal.com – UK Visa Application Platform | *Node.js, TS, PostgreSQL, Prisma, Redis, AWS, Cloudflare* 2026

- Client portal + admin for visa applications – assignment/call queues, email tracking, DSAR deletion, AES-256-GCM-encrypted PII on S3 – on a private-VPC/ECS/CloudFront/WAF stack that withstood a live **L7 DDoS** with zero data loss.

WorldVisaHub – Multi-Country Visa Platform | *Rails 8, Inertia, React 19, PostgreSQL, Sidekiq, AWS, Adyen* 2026

- Supervisor-built dynamic forms – **24 field types**, conditional logic, live preview, version pinning for in-flight orders – plus guided camera capture (on-device pose/light/blur checks) and a presigned-S3, field-encrypted document pipeline.

Userbird – Product Analytics & Session Replay | *React, Vite, BigQuery, Node/TS, Tailwind, Cloudflare Pages* Jun 2025

- Injectable JS SDK streams pageviews, events, and session recordings into BigQuery; React dashboard on Cloudflare Pages.

Mirai – Work Management Suite | *React, TypeScript, Node, Express, Prisma, PostgreSQL, Socket.io, Redis* May 2025

- ClickUp-style work management – task boards, docs, real-time chat, voice notes, and AI assistance across a workspace/team/org hierarchy; board-level RBAC with Redis authorization and Socket.io live sync.

Technical Skills

Languages: TypeScript, JavaScript, Python, Ruby, C/C++, Java, SQL **Databases**: PostgreSQL, MongoDB, Redis, BigQuery
Frameworks: Node.js, Express.js, NestJS, React.js, Next.js, Rails, Django, Prisma, Drizzle, Socket.io, Redux, Zustand, Tailwind
Cloud & DevOps: AWS (VPC, EC2, ECS Fargate, S3, RDS, ALB, CloudFront + VPC Origins, Route 53, WAF, Shield, ACM, KMS, STS, Secrets Manager, GuardDuty, CloudTrail, Rekognition, Textract), Terraform, Cloudflare (WAF, Turnstile), GitHub Actions CI/CD, Docker, PM2, Nginx
Security: L7/DDoS mitigation, WAF rules, AES-256-GCM & KMS at-rest encryption, presigned/signed URLs, STS assume-role, origin lock, rate limiting, JWT/RBAC/MFA, GDPR/DSAR, PII redaction, incident response
Concepts: REST APIs, Microservices, Multi-tenancy, Webhooks, OPC UA, Async I/O, Cron Automation, ADRs, OOP, DSA

Education

Government College University Lahore (GCUL) Lahore – CGPA 3.18
Bachelor of Sciences in Computer Science (BSCS) *Nov 2021 – May 2025*
